Lesson 1: Computer system

- **Computer** is an electronic set or device that process data and converting it into information.
- **Computer types:**
 - 1- Desktop 2- Laptop 3- Smart devices
- **Computer system consists of: (4)**

1- Hardware	2- Software	3- Humanware	4- Data & Information
<p>1- Hardware Part of computer you can touch.</p> <p>1. Input unit (Keyboard – Mouse – Mic – Joystick – Scanner – light pen)</p> <p>2. Output unit (Monitor – Speaker- Printer –Plotter)</p> <p>Note: Touch Screen is an input & output.</p> <p>3. Storage unit: (Hard desk – Flash memory – CD)</p> <p>Measurement units: (Bit – Byte – Kilo Byte – Mega Byte – Giga Byte – Tyra Byte)</p> <p>4. System unit:</p> <ul style="list-style-type: none">a- Mother boardb- Processor (Hz) <p>Hertz (Hz) is a measuring unit of processor</p> <p>c-Memory (RAM – ROM)</p> <p>RAM = Random Access Memory (temporary)</p> <p>ROM = Read Only memory</p>	<p>2- Software Part of computer you can't touch.</p> <p>1. Operating system (windows – Mac.....)</p> <p>2. Programming language (C# - C++ - Java...)</p> <p>3. Applications (Text editor)</p> <p>4. Utilities (Antivirus....)</p> <p>A. Closed source program A type of programs where you can't read its source code. It is only available for programmers or designers. Ex: Photoshop / Microsoft office / Adobe Reader / Windows</p> <p>B. Open source program They are the programs of source code available for use, editing, development and distribution. Ex: Open Shot/ Gimp /</p> <p>Software is based on the rights of ownership divided to three types:</p> <ul style="list-style-type: none">1) Freeware: allow the possibility to take full advantage of them without a fee.2) Shareware: trial program for limited time .	<p>1) Analyst 2) Designer 3) Programmer 4) User</p>	<p>1. Data a) Consists of individual facts or bits of information b) The computer stores data of all kinds (words, number, image, sound or videos).</p> <p>2. Information c) Information is the result of processing Data</p>

Lesson 2 : Operating System

Definition of operating system: -

A **group of programs** responsible for **managing computer parts** and Intermediary **between** the **user** and the **programs** on the one hand and between the hardware on the other hand

Operating system responsible for running

- 1) Hardware
- 2) Software

User can deal with the operating systems by

- 1) Command prompt
- 2) Graphical user interface

Operating system task

- 1) **Control** all devices connected with the computer (printer, scanner)
- 2) **Manage** the dealing between software and memory.
- 3) **Transferring** data between different computer units and saved inside storage units
- 4) **Security** (password)
- 5) It **provides** an interface through which the user can deal with the device.

▪ Closed source operating system	Mac OS (Apple Macintosh devices only) Windows (most famous operating system)
▪ Open source operating system	LINUX OS and its Distributions Fedora Ubuntu
▪ Mobiles operating systems	Google Android OS is an Example of open source operating system Apple iOS is an Example of closed source operating system

Advantages of Graphical User Interface for operating systems

- 1- **Graphical interface** displays programs in the form of regular windows
- 2- Users can use **dropdown menus** and toolbars to do his tasks
- 3- Users can **run more than one programs** at the same time
- 4- **Arabic language** can be used as an interface language for the programs
- 5- **Providing browser** to open website.

The similarities between operating systems

The **interfaces** of the **operating systems** can be **similar** in the following

- 1- **Background:** - may be colors, pictures that can be changed by the user
- 2- **Icons:** - small symbols that can be used to run programs
- 3- **Bars:** - used to contain icons such as date and time icons

Lesson 3: Dealing with files and folder

- Each operating system is depending on file system, which is used to control the storage, retrieval, organize and management of files.
- When the computer turned off all data in the main memory (RAM) vanishes and to save it we have to save it inside any storage unit.

Types of common files	Creating text files	Saving text files	Save	Save as
<ul style="list-style-type: none"> ✓ Video files ✓ Photos files ✓ Text files ✓ System files 	<ol style="list-style-type: none"> 1. Run any text editor program (word) 2. Type the text you want to write 	<ol style="list-style-type: none"> 1. Open file menu 2. Select save as 3. Save as dialogue box appears 4. Type the name of the file you want to save 5. Select the location where you want to save the file 6. Select 	<ul style="list-style-type: none"> • Used when creating the file for the first time • Used when a change happened to the file to save the change in the same file with the same name 	<ul style="list-style-type: none"> • Used when creating the file for the first time • Used when we change the name of the file or save the file in a new place or save the file by a new extension

- **Search for files and folder**

1- Search by using the name of file or folder or its Extension.

- **Folder definition :-**

A **place** inside the storage place **contains** a **file** or **group of files**, and sometimes **contains** a **folder** or other folders which is called **sub-folders**

~ We can create **new folder** by clicking on **Ctrl + Shift + N** from the keyboard

Creating folder 1- Right click on the area where you want to create new folder 2- Shortcut menu appears. 3- Select new folder . 4- Type the new folder name . Click Create Delete Folder 1- Right click on the folder you want to delete 2- From shortcut menu when we want to delete file or folder from Trash we select Delete from Trash	cut – paste When you cut folder, the folder moves from its current location and moves to a new one. Steps to cut folder <ol style="list-style-type: none"> a) Right click on the folder you want to cut. b) From shortcut menu select cut. c) Go to the new location. d) Right click. e) From shortcut menu select paste. Restoring deleted folders from recycle bin Any deleted file or folder moves to trash and we can restore it or delete it permanently <ol style="list-style-type: none"> 1- Double click on the recycle bin folder (trash folder). 2- Right click on the folder you want to restore. 3- From shortcut menu select Restore from Trash. 	Copy – Paste Make a backup copy from a folder in the same storage place or in another place. Steps to copy folder Right click on the folder you want to copy <ol style="list-style-type: none"> 1- From shortcut menu select copy 2- Go to the new location 3- Right Click 4- From shortcut menu select paste. 	Folder Rename 1- Right click on the folder you want to rename. 2- From shortcut menu select rename . 3- Write the new name then click Rename .
--	--	--	---

Lesson 4: Computer Network

• **Computer Network:** -

It is a connection of two or more computers through a communication intermediary wired or wireless connection in order to share resources. (Data and Hardware)

• **The importance of computer networking**

- 1) **Sharing** resources (such as printer – scanner – storage devices)
- 2) **Sharing** data and programs between computers network
- 3) A **centralized** database

Types of networking: -	Files sharing ~ Means to publish digitally stored information such as computer programs / multimedia (video – audio – images) / document / electronic books.	Steps of sharing Folders in windows operating systems 1- Put the files inside a folder. 2- Right click on the folder (Books) which contains the files you want to share 3- From shortcut menu select Share with 4- Select specific people from sub menu 5- File sharing dialogue box appears. 6- Choose the user you want to share with. 7- Click “ Add “to be from the allowed users. 8- Determine Permission Level (Read or Read / Write) 9- Click Share button.	Sharing Files in Fedora operating system 1- Click on Activities which located in the top bar of the opening screen. 2- Type “ Sharing “ in the search bar 3- Click on sharing icon 4- Turn the sharing button from OFF to ON 5- Turn Personal File Sharing into ON
1- (LAN) Local Area Network Computer network covering a limited area such as a (school, laboratory, and university) 2- (WAN) Wide Area Network Computer network covering a large geographical distance such as (countries, continents.) The internet is a type of WAN			
What's your computer name? 1- Right click on My Computer icon 2- Select Properties from the shortcut menu 3- Computer name appears in the box computer name	Access to a folder on the network 1) Click on “Network” on the desktop 2) Double click on the desired device to access it 3) The window of the all folders that are shared appears.		

Unit Two: Gimp

GIMP is an **open** and free source program

GIMP program for the **first time** it is usually on
(**multi-window mode**).

GIMP default Interface:

- 1.The Main Toolbox.
- 2 The Tool Options Dock.
3. Image windows.
- 4.(Layers/Channels/paths/Undo).
5. (Brushes/Patterns/Gradients).

click **F1** from the **keyboard** to open the **Help** of this program

Main menus in Gimp

❖ File menu

I- **New**

Create a new image

2- **Open**

Import Image for editing.

3- **Save**

4- **Save as**

To save your project.

GIMP extension is "**XCF**"

5- **Export**

To **export** the image as a file with the **appropriate extension:**
(JPEG – GIF – PNG)

❖ Select menu

I- **Invert**

❖ Layer menu

I- **Transparency** → Add Alpha Channel

❖ Windows menu

I- **Single-Window Mode**

Change from **multi** windows to **single** window

2- **Recently Closed Docks**

To **restore** any **closed** tabs

❖ Image menu

I- **Flatten Image**

Merging all **layers**, to become **one layer**

❖ Filter menu

Select the **appropriate filter**

In the dialogue box to create a new image:

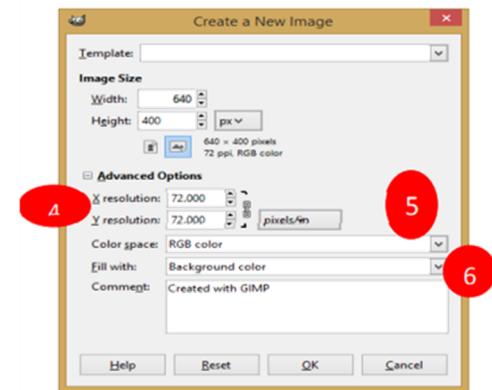

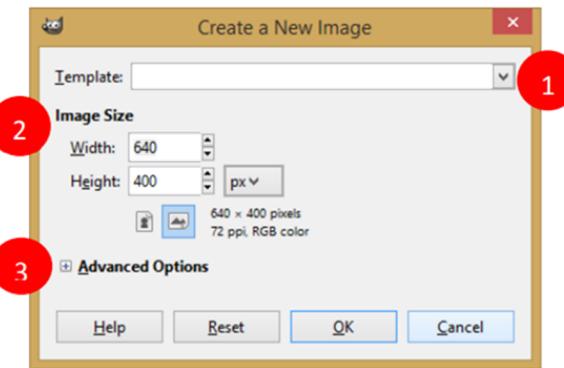

- 1-Templates: are previously ready-made designs prepared of the dimensions and the resolution of the image.
- 2-Image Size: to identify the dimensions of the new image (length and width) by clicking on the arrows.
- 3-Advanced Options: by clicking on + sign the rest of the dialogue box appears as follows:
- 4-Resolution: used to determine the image accuracy when printing
- 5-Color Space: This is used to determine the Image color scheme **RGB** or Gray scale
- 6-Fill with: It is used to specify the new image filling color which can be:
 - Background Color
 - Foreground Color
 - White filling the image in white color.
 - Transparency to make the image background transparent.

Image types:

Raster Images ~ Vector Images

There are three modes of color of the image:

RGB mode (red, green and Blue ~ 256 color degree) ~ Grayscale mode (up to 256 degrees of gray ranging from black to white) ~ Indexed mode.

▪ Gimp Tools:

Selection tools

Rectangle tool	Ellipse tool	Free Selection (Lasso)	Magic Wand tool (Fuzzy)	Smart Scissors
Used to draw an rectangular shape 	Used to select the oval shape 	Used to select an irregular part 	Used to specify similar color schemes 	Used to select the specific area or distinctive color 

Paint Tools

Pencil Tool	Blend Tool	Smudge tool	Clone	Paintbrush
used for free hand drawing 	used to make color gradation using the front or back color. 	used to mix the current color with the surrounding colors. 	To copy a part of the image and paste it in another place 	Used to draw a clear way 
Eraser	Ink	Bucket fill	zoom	
remove a coloring Space of a picture or a drawing. 	fountain pen to control drawing distinguished borders and edges with the brush 	Used to fill the selection. 	To enlarge the picture to see the details more clearly 	

Transforming and Resizing Tools

Move tool	Crop tool	Rotate too	Flip Tool	Scale tool
Used to move an image or image layers or selection or text. 	Used to cut part of an image. 	Used to rotate an image. 	Used to horizontally or vertically flip an image. 	Used to change the dimensions of an image. 

Layers tab tools

layer invisible 	add a new layer 	move layer top 	move layer lower 	copy current layer 	, delete current layer 
---	---	---	--	--	--
